Proceedings

Ninth IEEE International
EDOC Enterprise Computing Conference

Enschede, The Netherlands
19-23 September 2005

Sponsored by
IEEE Computer Society Technical Committee on Distributed Processing
IEEE Communications Society
CTIT
University of Twente
Telematica Instituut
NWO
TNO
AgentLink

In cooperation with
ACM
OMG
The Open Group
NAF
InterOP

Los Alamitos, California
Washington • Brussels • Tokyo
# Table of Contents

*Ninth IEEE International Enterprise Distributed Object Computing Conference (EDOC 2005)*

## Session 1: Enterprise Computing – Support for Business Processes

Bridging the Gap between Data Warehouses and Business Processes: A Business Intelligence Perspective for Event-Driven Process Chains  
*V. Stefanov, B. List, and J. Schiefer*

Extending BPEL for Run Time Adaptability  
*D. Karastoyanova, A. Houspanossian, M. Cilia, F. Leymann, and A. Buchmann*

Intelligent Aggregation of Purchase Orders in e-Procurement  
*G. Wang and S. Miller*

## Session 2: Real-Time Applications for the Extended Enterprise

Learning, Planning, and the Life Cycle of Workflow Management  
*D. Ferreira and H. Ferreira*

Dealing with Contract Violations: Formalism and Domain Specific Language  
*G. Governatori and Z. Milosevic*

Modelling Mobile Health Systems: An Application of Augmented MDA for the Extended Healthcare Enterprise  
*V. Jones, A. Rensink, and E. Brinksma*

An Architecture for Flexible Web Service QoS Negotiation  
*M. Comuzzi and B. Pernici*

## Session 3: Interoperability Models, Platforms, and Techniques

Ontology Urbanization for Semantic Integration: Dealing with Semantics within Large and Dynamic Enterprises  
*S. Izza, L. Vincent, and P. Burlat*

FTWeb: A Fault Tolerant Infrastructure for Web Services  
*G. Santos, L. Lung, and C. Montez*

A Method for Specifying Contract Mediated Interactions  
*C. Molina-Jimenez, S. Shrivastava, and J. Warne*

## Session 4: Model Driven Architecture (MDA) and Other Model-Driven Approaches

An Aspect Oriented Model Driven Framework  
*D. Simmonds, A. Solberg, R. Reddy, R. France, and S. Ghosh*

Transaction Support Using Unit of Work Modeling in the Context of MDA  
*W. Witthawaskul and R. Johnson*
An MDA-Oriented .NET Metamodel
J. Abd-Ali and K. El Guemhioui

Session 5: Modelling and Description Languages

An Approach to Relate Business and Application Services Using ISDL
D. Quartel, R. Dijkman, and M. van Sinderen

Modeling the ODP Computational Viewpoint with UML 2.0
J. Romero and A. Vallecillo

Semantics of UML 2.0 Activity Diagram for Business Modeling by Means of Virtual Machine
V. Vitolins and A. Kalnins

Session 6: Inter-enterprise Collaboration and Virtual Enterprises

Implementing Fair Non-repudiable Interactions with Web Services
P. Robinson, N. Cook, and S. Shrivastava

Assessment of Enterprise Information Security – The Importance of Prioritization
E. Johansson and P. Johnson

Improving IT Management at the BMW Group by Integrating Existing IT Management Processes
F. Fischer, F. Matthes, and A. Wittenburg

Session 7: Trust, Security, Privacy and QoS Issues in Enterprise Computing

Integration and Analysis of Functional and Non-functional Aspects in Model-Driven E-Service Development
H. Jonkers, M.-E. Iacob, M. Lankhorst, and P. Strating

Service Level Management Using QoS Monitoring, Diagnostics, and Adaptation for Networked Enterprise Systems

Session 8: Service- and Component-Oriented Development and Architecture

An Interactive Approach for Specifying OWL-S Groundings
G. Gannod, R. Brodie, and J. Timm

Timed Probabilistic Constraints over the Distributed Management Taskforce Common Information Model
I. Poernomo, J. Jayaputra, and H. Schmidt

Abstract Interactions and Interaction Refinement in Model-Driven Design
J. Almeida, R. Dijkman, L. Pires, D. Quartel, and M. van Sinderen

An Extended Event Matching Approach in Content-Based Pub/Sub Systems for EAI
G. Xu, W. Xu, and T. Huang

Author Index

vi
Preface

The EDOC conference series has travelled three times around the world now, alternating between stops on the continents of Asia, America and Europe. Via Gold Coast (Australia), San Diego (USA), Mannheim (Germany), Makuhari (Japan), Washington (USA), Lausanne (Switzerland), Brisbane (Australia) and Monterey (USA), EDOC 2005 completes its third world tour in Enschede (The Netherlands). EDOC has evolved to become a full-fledged International IEEE Conference, bringing together leading researchers and industry experts to discuss problems, solutions, and experiences related to enterprise computing.

The conference is as significant, if not more, as it was when it first started eight years ago. Enterprise computing continues to pose challenges to business architects, IT architects, software developers, and vendors of middleware, EAI and B2B integration solutions. Recent advances in Internet-based information and communication technology (ICT) have drastically improved the possibilities for businesses to engage in much more dynamic, new forms of cooperation. The appearance of networked enterprises, in which organisations work together for mutual benefit, leads to a change in the nature of enterprise computing for achieving operational cost saving and enhancing value-adding services. Enterprise computing traditionally deals with the organisational, technical and engineering challenges when introducing or integrating distributed business information systems within one organisation. Today, it has to manage application integration across company boundaries and support inter-organisational business processes, collaboration, and transactions, while satisfying the flexibility and security requirements of each business partner. Papers addressing these challenges can be found in the parts on Electronic Contracting, Enterprise Service Management and Business-to-Business Integration in these proceedings.

Over the years, EDOC has contributed to the advancement and adoption of middleware technologies, standards, and emerging new paradigms for enterprise computing. Eight years ago, the conference addressed innovations and applications based on CORBA, Java-RMI, DCOM, RM-ODP and UML. Now those have matured and researchers focus on their extensions and descendants: the CORBA Component Model (CCM), the Meta Object Facility (MOF), Web Services, Service Oriented Architecture (SOA), and Model Driven Architecture (MDA). This change of focus is reflected in this year’s conference program, which includes sessions around the cutting-edge topics of enterprise computing support for business processes; real-time applications for the extended enterprise; interoperability models, platforms, and techniques; MDA and other model-driven approaches; modelling and description languages; inter-enterprise collaboration and virtual enterprises; trust, security, privacy and QoS issues in enterprise computing; and service- and component-oriented development and architecture. In particular, MDA has (as it did last year) again caught the attention of both researchers and practitioners. Enterprise modelling and enterprise architecture have always been high on the agenda of EDOC, but since the OMG defined the MDA roadmap for distributed system development three years ago, more than half of the EDOC papers address topics related to model-driven design. Also, many papers address topics on services computing, which leverages computing technology to model, create, and manage business solutions, scientific applications, as well as modernized services. The underneath technology suite includes Web services and SOA, business consulting methodology and utilities, business process modelling, transformation and integration.

In total, these proceedings present 25 high-quality research and experience papers selected from 79 submissions that have not been published previously. All submissions were thoroughly reviewed by at least three members of the program committee who were familiar with the subject addressed. The program committee members and reviewers each deserve credit for the diligent and rigorous peer-reviewing and paper selection process. Unfortunately, we had to reject several papers with good reviews due to the limitations imposed by a three-day single-track conference. At the conference, the selected papers are presented by the authors and discussed in highly interactive sessions. Some of the papers will become journal articles in special issues of journals of wide circulation such as the IEEE Transactions on Systems, Man, and Cybernetics (SMC) Part C: Applications & Reviews, and the International Journal of Cooperative Information Systems (IJCIS). In addition, a post-conference article will be published in IEEE IT Professional in Nov-Dec 2005. This article will cover the important topics and issues discussed in the conference.
In addition to the paper presentations, this year’s program also includes two distinguished keynote speakers: Prof. Dr. Frank Leymann, Full Professor and Director of the Institute of Architecture of Application Systems from the University of Stuttgart, Germany and Dr. Umeshwar Dayal, Director of the Intelligent Enterprise Technologies Laboratory from Hewlett-Packard Labs Palo Alto, California, USA.

Finally a word of thanks, to all those who submitted papers, to the program committee members and their colleagues for reviewing, to the steering committee for directing us, to Bryan Wood the Workshop Chair, to Lea Kutvonen the Publicity Chair, to the local arrangements committee for managing the website as well as handling practical and administrative matters, and to Danielle Martin from IEEE Computer Society Press for the production of this book, which is the culmination of a remarkable, mostly virtual, collaborative effort involving all of you.

The conference was organized and sponsored by the IEEE Communications Society, the IEEE Computer Society, the University of Twente / Centre for Telematics and Information Technology, Telematica Instituut, TNO, and the Netherlands Organisation for Scientific Research (NWO). In addition, the conference was also supported by the ACM, the OMG, The Open Group, and the Nederlands Architectuur Forum.

Thank you for your active participation in IEEE EDOC 2005. We hope that you will find the conference to be productive and informative and that you enjoy your stay in Enschede. We look forward to seeing you next year at EDOC 2006 in Hong Kong.

Marten J. van Sinderen
Maarten W.A. Steen
Marc M. Lankhorst
Markus Aleksy
Patrick C.K. Hung
Committee Members and Reviewers

General Chairs

Marten J. van Sinderen, University of Twente, The Netherlands
Maarten W.A. Steen, Telematica Instituut, The Netherlands
Marc M. Lankhorst, Telematica Instituut, The Netherlands

Program Chairs

Markus Aleksy, University of Mannheim, Germany
Patrick C.K. Hung, University of Ontario Institute of Technology, Canada

Workshop Chair

Bryan Wood, Open-IT, UK

Publicity Chair

Lea Kutvonen, University of Helsinki, Finland

Local Arrangements Committee

João Paulo A. Almeida, University of Twente, The Netherlands
Patricia Dockhorn Costa, University of Twente, The Netherlands
Remco M. Dijkman, University of Twente, The Netherlands
Maria-Eugenia Iacob, Telematica Instituut, The Netherlands
Annelies Klos, University of Twente, The Netherlands

Steering Committee

Colin Atkinson, University of Mannheim, Germany
Keith Duddy, DSTC, Australia
Zoran Milosevic, DSTC, Australia
Guijun Wang, Boeing, USA
Alain Wegmann, EPFL, Switzerland
Barrett Bryant, University of Alabama-Birmingham, USA

Program Committee

Jan-Øyvind Aagedal, SINTEF, Norway
David Akehurst, University of Kent, UK
Mikio Aoyama, Nanzan University, Japan
Jean Bézivin, Université de Nantes, France
Chris Bussler, Digital Enterprise Research Institute, Ireland
Chia-Chu Chiang, University of Arkansas at Little Rock, USA
Geoff Coulson, University of Lancaster, UK
Fred Cummins, EDS, USA
Wolfgang Emmerich, Zuhlke Engineering, UK
Luis Ferreira Pires, University of Twente, The Netherlands
Tracy Gardner, IBM Hursley, UK
Kurt Geihs, University of Kassel, Germany
Claude Godart, Université Henri Poincaré, Nancy and INRIA, France
Aniruddha Gokhale, Vanderbilt University, USA
Jun Han, Swinburne University of Technology, Australia
Jan Haasmann, University of Paderborn, Germany
Boudewijn Haverkort, University of Twente, The Netherlands
Yigal Hoffner, IBM Research Lab, Switzerland
Henry Kim, York University, Canada
Thomas Kühlne, Technische Universität Darmstadt, Germany
Lea Kutvonen, University of Helsinki, Finland
Peter F. Linington, University of Kent, UK
Claudia Linhoff-Popien, Munich University, Germany
Jishnu Mukerji, Hewlett Packard, USA
Elie Najm, ENST, France
Francois Pacull, Xerox Research Europe, France
George A. Papadopoulos, University of Cyprus, Cyprus
Frantisek Plasil, Charles University, Czech
Thomas Preuss, Fachhochschule Brandenburg, Germany
Rajeev Raje, Indiana University; Purdue University, Indianapolis, USA
Kerry Raymond, DSTC, Australia
Tom Ritter, Fraunhofer Fokus, Germany
Richard Mark Soley, OMG, USA
Don Sparrow, MITRE Corporation, USA
Jonathan Sprinkle, University of California, Berkeley, USA
Susanne Strahringer, European Business School, Germany
Kerry Taylor, CSIRO, Australia
Sandy Tyndale-Biscoe, Open-IT, UK
Antonio Vallecillo, University of Malaga, Spain
Andrew Watson, OMG, USA
Edward Willink, Thales Research and Technologies, UK
Bryan Wood, Open-IT, UK
Christian Zeidler, ABB Corporate Research, Germany

Additional Reviewers

Philipp Baer, University of Kassel, Germany
Steffen Bleul, University of Kassel, Germany
Jochen Fromm, University of Kassel, Germany
Yan Jin, Swinburne University of Technology, Australia
Khaled Khan, University of Western Sydney, Australia
Michael Lawley, DSTC, Australia
Nathalie Moreno, University of Malaga, Spain
Steffen Jon Oldevik, SINTEF, Norway
Jose Raul Romero, University of Malaga, Spain
Arijit Sengupta, Indiana University, USA
David Skogan, SINTEF, Norway
Antony Tang, Swinburne University of Technology, Australia
Jun Yan, Swinburne University of Technology, Australia
Michael Zapf, University of Kassel, Germany
